Election/Restrictions

Applicant's election without traverse of claims 4-9 in Paper No. 8 is acknowledged.

Claims 1-3 and 10-13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 8.

Claim Objections

Claim 6 is objected to because of the following informalities: The Examiner suggests claim 6, line 8, "the center axis" should be "a center axis". Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 4 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Namiki, U.S. Patent No. 4313981.

Namiki discloses applicants' invention, specifically teaching an apparatus comprising:

A roller with chamfered portions formed at both end portions of an outer peripheral surface thereof with a core bar formed in a substantially cylindrical shape; and a coated elastic body provided on the outer peripheral surface of the core bar, as shown Figs. 3-6.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-6 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Namiki, U.S. Patent No. 4313981.

Namiki discloses the claimed invention except for a specific range in width and an angle of the chamfered portions; and the coated elastic body has hardness in the range from 40 to 70. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have a certain range in width and an angle, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Namiki, U.S. Patent No. 4313981.

Art Unit: 3654

Namiki discloses the claimed invention except for the core bar is made of aluminum. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the core bar with aluminum, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references of record show other examples of paster roller.
